## SMART WASTE MANAGEMENT SYSTEM FOR METROPOLITAN CITIES

## PROBLEM STATEMENT

i).The world population has been	The process of collecting and processing materials that
quadrupled, and there has been	would otherwise be thrown away as trash and turning
major relocations fromrural to	them into new products.
urban areas.there is expected to	
reach 70% by 2050.	
rapid urbanization lead to huge increase in waste generation ,so the traditional methods of waste collection have become inefficient and costly.  iii). The mode efficient way this As pop	located near the society, in the garden, or a separate indoor waste collection room is established.  ulations grow in urban areas, so does the need for
	waste management solutions that can accommodate
	increasing amounts of trash. Some cities are taking on
	this challenge by installing pneumatic waste disposal
of waste collection.	bins that connect to a series of underground pipes.
iv). Traditional waste collection issue are i) inefficient way to identify the waste collection	Using smart garbage management systems that allows the user to know the fill level of each garbage bin in a locality or city at all times, to give a cost-effective and time-saving route to the truck
ii) Fixed routine for waste collection	
v) Management issue are i) wastage of resources(labor, fuel etc.)	Implement automated waste collection system to collect garbage and transport it through an underground vacuum pipes or tubes with a high speed to a nearby collecting station where the waste can be kept sealed and in
ii) Missed pick-ups,causing unclean	compacted containers.
environment
